EXPERIENCE

Associate Software Engineer **Oct 2025 – Present**
Accenture India *Bengaluru, India*

- Wrote the FastAPI APIs for the prediction system and took its core logic from scratch to the system's first production go-live.
- Built the Fargate data pipeline that reliably pulls AVEVA CDS industrial sensor data and feeds the APIs, ML pipeline, and model-evaluation pipeline.
- Developed AWS async processing (Lambda, SQS, Step Functions, DynamoDB state) with reliability ownership: VPC-aware services, rate limiting, auth boundaries.
- Building the complete SageMaker flow — data retrieval, processing, model prediction, and alerts — supporting 80k+ models.

Software Engineer Intern **Feb 2025 – Jun 2025**
Accenture India *Bengaluru, India*

- Modeled discrete-event simulations of greenfield shop-floor operations using ML algorithms to support predictive analysis.

Full Stack Developer Intern **Aug 2024 – Dec 2024**
Envint Global *Remote*

- Developed the backend base of a new project from scratch — Node.js/Express APIs serving a sustainable energy consumption calculator — with JWT-based authentication and role-based access control (RBAC), designed for future expansion.
- Built Python utilities for PDF creation and extraction to automate document workflows for ESG/sustainability reporting.

SKILLS

Backend: Node.js, Express.js, FastAPI, REST APIs, GraphQL, Microservices, WebSockets, Socket.IO, JWT, OAuth2
Cloud & Infra: AWS Lambda, ECS Fargate, SageMaker, S3, IAM, VPC, Linux, Docker, Git, Terraform, CI/CD
Data & Messaging: SQL (PostgreSQL, MySQL), NoSQL (MongoDB, DynamoDB), Redis, SQS, Step Functions, Kafka
AI Systems: Machine Learning, RAG Pipelines, Vector Databases, Embeddings, LLM APIs, Prompt Orchestration
Backend Reliability: Async Workflows, Rate Limiting, Retries, Caching, Cost-aware API Design
Languages: Python, Java, TypeScript, JavaScript, Go / Golang, C++
DSA & Problem Solving: Strong proficiency in Data Structures, Algorithms, and Competitive Programming — LeetCode Peak Rating 1563

PROJECTS

Smart Media Uploader | **GitHub** *FastAPI, AWS S3, DynamoDB, SQS, Lambda, Step Functions, ECS Fargate*

- Built upload orchestration with JWT auth, 15-minute presigned S3 URLs, DynamoDB upload sessions, owner checks, MIME/extension validation, and a 500 MB file cap.
- Modeled async media processing as SQS – dispatcher Lambda – Step Functions – ECS workers, branching image/video/audio jobs and writing progress/heartbeats to DynamoDB.

NoviSentinel | **IntroPage** | **GitHub** *Python, FastAPI, PostgreSQL, Redis, Presidio, Detoxify, Docker*

- Built an AI safety firewall for LLM apps with real-time input/output scanning for prompt injection, PII, exposed credentials, and toxicity.
- Implemented API-key auth, Redis sliding-window rate limiting, PostgreSQL scan logs, HMAC-SHA256 signed webhooks, and a Python SDK with sync/async clients.

NoviConnect | **Live** | **GitHub** *Node.js, Express 5, TypeScript, MongoDB, Redis, Socket.IO*

- Built REST + Socket.IO backend with cookie auth shared across HTTP and socket handshakes, MongoDB chat/message models, Redis presence, refresh sessions, and rate limits.
- Designed E2EE-aware message storage: validates encrypted envelopes, stores ciphertext and wrapped keys, and supports encrypted attachment metadata without server-side decryption.

EDUCATION

Institute of Engineering & Technology, Devi Ahilya Vishwavidyalaya **Indore, MP, India**
Bachelor of Engineering, CGPA – 7.5 *2021 – 2025*

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional
Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
