EXPERIENCE

Associate Software Engineer (Internship → Full-Time) **Feb 2025 – Present**

Accenture India *Bengaluru, India*

- Worked on AWS data pipelines using Lambda/Fargate components for long-running processing, status tracking, and downstream prediction API handoff.
- Built backend APIs for AVEVA CDS industrial sensor-data workflows, separating ingestion, validation, and dashboard-facing reads through asynchronous processing.
- Stored model and pipeline configuration in DynamoDB, shaping API contracts around validation, traceability, and inference-ready payloads.
- Handled backend reliability concerns across VPC-aware services, rate limiting, auth boundaries, and release/debug coordination with cross-functional teams.

Backend Developer Intern **Aug 2024 – Dec 2024**

Envint Global *Remote*

- Built Node.js/Express CMS APIs with JWT access tokens, Redis-backed refresh sessions, encrypted cookies, bcrypt hashing, and MongoDB models.
- Implemented Admin/Moderator/User RBAC middleware and validators to protect article, user, file, and editorial workflow endpoints.

JAMstack Developer Intern **Jun 2024 – Jul 2024**

WeFrameTech *Remote*

- Integrated Directus and MedusaJS-backed content/commerce flows, normalizing API payloads for reusable JAMstack delivery.

SKILLS

Backend: Node.js, Express.js, FastAPI, REST APIs, WebSockets, Socket.IO, JWT, OAuth2
Cloud & Infra: AWS Lambda, ECS Fargate, S3, IAM, VPC, Docker, Terraform, CI/CD
Data & Messaging: MongoDB, PostgreSQL, MySQL, Redis, DynamoDB, SQS, Step Functions, Kafka
AI Systems: RAG Pipelines, Vector Databases, Embeddings, LLM APIs, Prompt Orchestration
Backend Reliability: Async Workflows, Rate Limiting, Retries, Caching, Cost-aware API Design
Languages: Python, Java, TypeScript, JavaScript, Go / Golang, C++
DSA & Problem Solving: Strong proficiency in Data Structures, Algorithms, and Competitive Programming — LeetCode Peak Rating 1563

PROJECTS

Smart Media Uploader | **GitHub** *FastAPI, AWS S3, DynamoDB, SQS, Lambda, Step Functions, ECS Fargate*

- Built upload orchestration with JWT auth, 15-minute presigned S3 URLs, DynamoDB upload sessions, owner checks, MIME/extension validation, and a 500 MB file cap.
- Modeled async media processing as SQS – dispatcher Lambda – Step Functions – ECS workers, branching image/video/audio jobs and writing progress/heartbeats to DynamoDB.

NoviSentinel | **IntroPage** | **GitHub** *Python, FastAPI, PostgreSQL, Redis, Presidio, Detoxify, Docker*

- Built an AI safety firewall for LLM apps with real-time input/output scanning for prompt injection, PII, exposed credentials, and toxicity.
- Implemented API-key auth, Redis sliding-window rate limiting, PostgreSQL scan logs, HMAC-SHA256 signed webhooks, and a Python SDK with sync/async clients.

NoviConnect | **Live** | **GitHub** *Node.js, Express 5, TypeScript, MongoDB, Redis, Socket.IO*

- Built REST + Socket.IO backend with cookie auth shared across HTTP and socket handshakes, MongoDB chat/message models, Redis presence, refresh sessions, and rate limits.
- Designed E2EE-aware message storage: validates encrypted envelopes, stores ciphertext and wrapped keys, and supports encrypted attachment metadata without server-side decryption.

EDUCATION

Institute of Engineering & Technology, Devi Ahilya Vishwavidyalaya **Indore, MP, India**

Bachelor of Engineering, CGPA – 7.5 *2021 – 2025*

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional
Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
